

The global economy is estimated to expand by 6% in 2021 due to the economic recovery packages introduced by advanced economies, the acceleration of vaccination programs in Q2 2021, economic adaptations to the New Normal, and regional economic recoveries throughout 2021. In Q1 2021, Cambodia experienced a decline in economic activity across sectors such as tourism, construction, investments, and garment exports. On a positive note, exports such as bicycles, electronic components, wood products, and agricultural products have maintained a moderate level of growth.
